

## Vehicle CAN Database

Honda  
Civic 2017-

## Overview

Racelogic have acquired CAN signals for customers to use with VCI (Vehicle CAN Interface) products. This information is available by listening on the relevant CAN bus on the vehicle and interpreting the messages to form easy to use information which is then available for data logging.

Users of Racelogic products will need to download a file from our website here:

<https://vboxmotorsport.co.uk/index.php/en/customer-area/vehicle-can-database>

Select "Honda" and "Civic 2017-" from the dropdown selection to download the relevant file.

Refer to the user manual of your product for details on how to use this file.

## Wiring Connection

On this vehicle all information is available via the OBD-II connector, this uses the standard pins of CAN High on pin 6 and CAN low on pin 14.

PLEASE NOTE: This information is provided as a general guide to CAN Bus wire colours only and colours may be subject to change without notice. Racelogic accepts no responsibility for damage or malfunction caused by incorrect wiring of its products to a vehicle. Any connection to a vehicle CAN Bus should be done by a trained automotive technician.

### CAN bus Connection

The CAN bus must be configured at a baud rate of 500k.

### Cable - VBox Video HD2

To connect the HD2 system to an OBDII port, an [RLCAB069L](#) cable must be used. [Click here](#) for a cable drawing including PIN outs for the RLCAB069L.

### Cable - Other Racelogic Products

To connect between your racelogic product and the vehicle a standard OBD Cable is available, if this was not supplied with the product please contact us for details.
